SQL: Data Manipulation (DML)

SQL Set Operations

---

---

---

---

---

---

---

---

Relational Algebra

◆ Relational algebraic operations:

■ Projection

■ Restriction

■ Product

■ Join

■ Division

■ Union

■ Intersection

■ Difference

Unary table operation

Binary table operation

Keith Tang

COMP2714

2

---

---

---

---

---

---

---

---

Relational Algebra

◆ Unary operators:

■ Projection – pick out columns

■ SQL: SELECT <columns>

■ Restriction – pick out rows meeting certain conditions

■ SQL: WHERE <conditions>

Unary table operation

Keith Tang

COMP2714

3

---

---

---

---

---

---

---

---

## Relational Algebra

### Binary operators

- Product – SQL: CROSS JOIN
- Join – SQL: INNER JOIN, OUTER JOIN  
SQL: FROM clause
- Division – no single SQL counterpart (later)

Keith Tang

COMP2714

4

---

---

---

---

---

---

---

---

## Relational Algebra

### Binary SET operators Union Compatible

- A Union B :  
All rows from both tables
- A Intersect B :  
Rows existed in both tables
- A Difference B :  
Rows in one but not in other table

Keith Tang

COMP2714

5

---

---

---

---

---

---

---

---

## Union, Intersect, and Difference

### SQL2 defines set operations to combine results of two or more queries into a single result table:

- Union of two tables, A and B, is table containing all rows in either A or B or both
- Intersection is table containing all rows common to both A and B
- Difference (Except) is table containing all rows in A but not in B

### Two tables must be union compatible

### SQL Server 2000 supports only UNION [ALL]

Keith Tang

COMP2714

6

---

---

---

---

---

---

---

---

## Union, Intersect, and Difference

◆ Format of set operator clause in each case is:

```
subquery1
setOp [ALL] [CORRESPONDING
        BY {column1 [, ...]}]]
subquery2
```

- ◆ If ALL specified, result include duplicate rows
- ◆ If CORRESPONDING BY specified, set operation performed on the named column(s)
- ◆ If CORRESPONDING specified but not BY clause, operation performed on common columns

Keith Tang

COMP2714

---

---

---

---

---

---

---

---

## Books Database Schema

authors (au\_id, au\_fname, au\_lname, phone, address, city, state, zip)

title\_authors (title\_id, au\_id, au\_order, royalty\_share)

publishers (pub\_id, pub\_name, city, state, country)

royalties (title\_id, advance, royalty\_rate)

titles (title\_id, title\_name, type, pub\_id, pages, price, sales, pubdate, contract)

---

---

---

---

---

## Books Database Schema

Keith Tang

COMP2714

9

---

---

---

---

---

---

---

---

## UNION

- ◆ List all cities where there is either an author or a publisher:

```
■ SELECT city FROM authors
   WHERE city IS NOT NULL
   UNION
   SELECT city FROM publishers
   WHERE city IS NOT NULL;
```

- ◆ OR

```
■ SELECT city FROM authors
   WHERE city IS NOT NULL
   UNION ALL
   SELECT city FROM publishers
   WHERE city IS NOT NULL;
```

Keith Tang

COMP2714

10

---

---

---

---

---

---

---

---

## INTERSECT

- ◆ List all cities where there is both an author and a publisher:

```
■ SELECT city FROM authors
   INTERSECT
   SELECT city FROM publishers;
```

- ◆ Or

```
■ SELECT DISTINCT city
   FROM authors
   WHERE city IN (SELECT city
                  FROM publishers);
```

Keith Tang

COMP2714

11

---

---

---

---

---

---

---

---

## INTERSECT – SQL1

- ◆ Could rewrite this query without INTERSECT:

```
■ SELECT DISTINCT a.city
   FROM authors a
   JOIN publishers p ON a.city = p.city;
```

- ◆ Or:

```
■ SELECT DISTINCT city
   FROM authors a
   WHERE EXISTS
     (SELECT *
      FROM publishers p
      WHERE a.city = p.city);
```

Keith Tang

COMP2714

12

---

---

---

---

---

---

---

---

## INTERSECT – Alternatives

- ◆ Using JOIN
- ◆ Using Subquery with IN
- ◆ Using Subquery with EXISTS
- ◆ Using INTERSECT if supported

Keith Tang

COMP2714

13

---

---

---

---

---

---

---

---

## Difference : EXCEPT / MINUS

- ◆ List of all cities where there is an author but no publisher:
  - ```
SELECT city FROM authors
EXCEPT      -- Oracle uses MINUS
SELECT city FROM publishers;
```
- ◆ Or
  - ```
SELECT DISTINCT city
FROM authors
WHERE city NOT IN
(SELECT city
FROM publishers);
```

Keith Tang

COMP2714

14

---

---

---

---

---

---

---

---

## EXCEPT - SQL1

- ◆ Could rewrite this query without EXCEPT:
  - ```
SELECT DISTINCT a.city
FROM authors a
LEFT JOIN publishers p
ON a.city = p.city
WHERE p.city IS NULL;
```
- ◆ Or
  - ```
SELECT DISTINCT city
FROM authors a
WHERE NOT EXISTS
(SELECT *
FROM publishers p
WHERE a.city = p.city);
```

Keith Tang

COMP2714

15

---

---

---

---

---

---

---

---

## EXCEPT - Alternatives

- ◆ Using OUTER JOIN
- ◆ Using Subquery with NOT IN
- ◆ Using Subquery with NOT EXISTS
- ◆ Using EXCEPT or MINUS if supported

Keith Tang

COMP2714

16

---

---

---

---

---

---

---

---

## Another Example

```
SQL> SELECT * FROM mypubs;
```

```
PUB PUB_NAME
-----
P01 Pearson
P02 McGraw-Hill
P03 Morgan-Kaufmann
P04 New World Book
```

- ◆ Find the publishers who have not yet published a book

```
SQL> SELECT * FROM mytitles;
```

```
TIT TITLE_NAME  TYPE      PUB PUBDATE
-----
T01 1977!       history    P01 2000-08-01
T02 World War I history    P03 1998-04-01
T03 Database    computer   P03 2000-09-01
T05 Your Ideas  psychology P01 2001-01-01
T10 Mr President biography
T13 Civil War   history    P02 1999-05-31
```

Keith Tang

COMP2714

17

---

---

---

---

---

---

---

---

## Using LEFT [OUTER] JOIN

- ◆ Find the publishers who have not yet published a book

```
◆ SELECT *
  FROM mypubs p
     LEFT JOIN mytitles t  -- LEFT JOIN
        ON p.pub_id = t.pub_id
     WHERE t.pub_id IS NULL;
```

PUB	PUB_NAME	TIT	TITLE_NAME	TYPE	PUB	PUBDATE
P01	Pearson	T01	1977!	history	P01	2000-08-01
P03	Morgan-Kaufmann	T02	World War I	history	P03	1998-04-01
P03	Morgan-Kaufmann	T03	Database	computer	P03	2000-09-01
P01	Pearson	T05	Your Ideas	psychology	P01	2001-01-01
P02	McGraw-Hill	T13	Civil War	history	P02	1999-05-31
P04	New World Book					

Keith Tang

COMP2714

18

---

---

---

---

---

---

---

---

## Using EXCEPT / MINUS

- Find the publishers who have not yet published a book

```
SELECT pub_id, pub_name
FROM mypubs
```

MINUS

```
SELECT p.pub_id, pub_name
FROM mypubs p
JOIN mytitles t
ON p.pub_id =
t.pub_id
;
```

PUB PUB\_NAME

```
-----
P01 Pearson
P02 McGraw-Hill
P03 Morgan-Kaufmann
P04 New World Book
```

MINUS

PUB PUB\_NAME

```
-----
P01 Pearson
P01 Pearson
P02 McGraw-Hill
P03 Morgan-Kaufmann
P03 Morgan-Kaufmann
```

Keith Tang

COMP2714

19

## Using NOT IN

- Find the publishers who have not yet published a book

```
SELECT pub_id, pub_name
FROM mypubs
```

WHERE pub\_id NOT IN

```
(SELECT pub_id
FROM mytitles
)
;
```

PUB PUB\_NAME

```
-----
P01 Pearson
P02 McGraw-Hill
P03 Morgan-Kaufmann
P04 New World Book
```

NOT IN

PUB

```
---
P01
P01
P02
P03
P03
```

Keith Tang

COMP2714

20

## Using NOT EXISTS

- Find the publishers who have not yet published a book

```
SELECT pub_id, pub_name
FROM mypubs p
```

WHERE ~~pub\_id~~ NOT EXISTS

```
(SELECT 1
FROM mytitles t
WHERE p.pub_id =
t.pub_id
)
;
```

PUB PUB\_NAME

```
-----
P01 Pearson
P02 McGraw-Hill
P03 Morgan-Kaufmann
P04 New World Book
```

NOT EXISTS

```
P01
--- P02
1 --- P03 P04
1 1 ---
1 1
```

Keith Tang

COMP2714

21

## VIEW – A Quick Introduction

```
◆ DROP VIEW myview;  
◆ CREATE OR REPLACE VIEW myview  
  AS  
    subquery  
;  
  
◆ SELECT *  
  FROM myview  
  WHERE <condition>  
;
```

Keith Tang
